User Guide

To access the deployed version of the api : starfish-app-wjuq9.ondigitalocean.app

Local Setup:

1. Download the files from these 2 github repositories
   a. https://github.com/Vangmay/vidya.forum-Backend
   b. https://github.com/Vangmay/vidya.forum-Frontend
2. Navigate into the frontend folder using the terminal and run "npm install" on the terminal
3. Backend runs on port 8080
4. Host the database locally by creating one using pgadmin (postgresql)
5. Change the details in .env file which can be found in the backend repository
6. Run : go run main.go
7. Wait for fiber output to show and then run : "npm start"
